EDUCATION

University of North Carolina at Chapel Hill

Expected December 2026

Bachelor of Science in Computer Science

Chapel Hill, NC

- **Major GPA:** 3.74/4.00
- **Relevant Coursework:** Data Structures, Software Engineering, Design Patterns, Files and Databases, Computer Organization, Modern Web Programming, Algorithms and Analysis, Theory of Computation, Discrete Math

EXPERIENCE

Databricks

May 2026 - August 2026

Software Engineer Intern

Mountain View, CA

- Developed support for sharing **shallow-cloned Delta tables** through OpenSharing, eliminating the need to duplicate tables' underlying data to share them
- Implemented **selective credential vending** and authorization workflows, resolving each clone's base table through **Unity Catalog's dependency-authorization framework** to grant read-scoped access per storage root
- Designed and integrated backend APIs for metadata resolution, access validation, and credential issuance, building a per-root cloud file signer across **S3, Azure, and GCS**
- Implemented **fail-closed security controls** for multi-root sharing, including boundary-safe path containment, deepest-root selection, and independent credential validation to prevent cross-table data access
- Rolled out the feature to **4 private-preview partners**, avoiding **25+ TB** of duplicate storage across customer workloads

Mercor

November 2025 - January 2026

Machine Learning Engineer

Remote

- Built an **end-to-end ingestion and QC application** for SFT trajectory data powering coding improvements to **Meta's Code World Model (CWM)**, packaging validated datasets to lab delivery specs
- Combined **deterministic validation gates** (schema validation, sandboxed execution, trace-output verification) with **multi-criteria LLM-as-judge scoring** of reasoning fidelity, code correctness, and instruction adherence
- Automated triage of **1000+ trajectories**, cutting manual review load by **42%** and improving acceptance consistency across annotators

Amazon

May 2025 - August 2025

Software Development Engineer Intern

Bellevue, WA

- Developed an AI-powered platform to automate error log analysis using LLM agents and a knowledge base
- Centralized disparate service logs into a unified **AWS CloudWatch** monitoring account, establishing a reliable foundation for automated analysis
- Engineered a multi-agent system using **AWS Bedrock** and a **Retrieval-Augmented Generation (RAG)** pipeline to deliver context-aware incident diagnosis from runbooks and documentation
- Implemented a workflow using **Python AWS Lambda** to operationalize the platform end-to-end, enabling engineers to resolve incidents **2.5×** faster

Fidelity Investments

June 2024 - August 2024

Software Engineer Intern

Durham, NC

- Created an internal webpage enhancing financial associates' ability to analyze customer accounts and assets, cutting customer response time by 30% and increasing efficiency by streamlining conversations
- Developed responsive user interfaces with **Angular** and **RxJS**, conditionally displaying relevant information
- Engineered a **NestJS** and **GraphQL** backend to deliver real-time personalized recommendations

SKILLS

Languages: Python, Java, C, SQL, JavaScript, TypeScript, HTML/CSS, Swift

Machine Learning & Data: Pandas, Python, SQL, AWS Bedrock, Data Pipelines, REST APIs

Frameworks: React, Angular, NestJS, Django, Flask, FastAPI, Material-UI

Cloud & Infrastructure: AWS (Lambda, Bedrock, Lex, CloudWatch), Docker, PostgreSQL, Scalable Services

Developer Tools: Git, LaunchDarkly, Selenium, BeautifulSoup, CI/CD
